

FLK Cabin

High protection - low loss

Protection against heat and cold

With the optimal protection against the outside temperature, both driver and machine can work under all conditions.

An FLK Cabin is insulated to withstand extreme cold and heat. It protects the driver far better than other cabins on the market.

FLK Cabins comes with both optional air-condition and climate control for the high temperatures and optional extra heating units for the low temperatures.

With these characteristics, optimal productivity is achieved and unnecessary pauses in the work are avoided.

FLK Cabins

Great view - small risk

Avoiding accidents

The view to the machines surroundings are of vital importance for the drivers ability to avoid accidents and collisions. Especially at high lifts and where the machine is operating amongst pedestrians, there is great risk of accidents involving personal injury.

Compared to other cabins, the FLK Cabin is constructed in such a way, that the driver has the optimal view in all directions. The FLK Cabin therefore plays an important part in the passive security-system of any truck, helping to avoid costly accidents.

At the same time, the driver is also protected. All FLK Cabins have been tested and officially approved to withstand impacts and falling objects.

FLK Cabins

Low noise level - high productivity

Working environment

The increasing focus on work environment often makes it necessary to protect the driver. Not only from the noise and vibrations from the machine itself, but also from noise from the surroundings.

Noise and vibrations from the machine

With an FLK Cabin, the driver is well protected. The cabin is separated from the machine with 4 main rubber bearings. This effectively prevents noise and vibrations spreading from the machine to the Cabin. The cabin is also equipped with noise-dampening materials, shielding from the outside noise.

That's why the FLK Cabins noise level is among the lowest on the market.

Noiselevel	According to EN12053
Hyster 4-5.5T	L ^{PAZ} : 74 dB(A)
Hyster 6-9T	L ^{PAZ} : 71 dB(A)

Noise from surroundings

The effective noise-insulation and the solid construction of the FLK Cabin also protects the driver from noise from the surroundings. That's why the FLK Cabin is also very suitable, where machines are working in noisy surroundings.
